Chair. The control of this BAC-end sequence was carried out as part of a collaboration with the BaK-end sequence was carried out as part of a collaboration with the BaK-end sequence was carried out as part of a collaboration with the BaK-end sequence map of the Drosophila. The BDGP is constructing a physical map of the Drosophila please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Googawa and Aaron Mammoser in Pieter de Jong's laboratory in the Despartment of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-99 and was constructed by partial ECRI digestion of Drosophila DNA provided by the BDGP from the EGRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain used for the BDGP's pl and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila (Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org the BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the ECORI digestion of Drosophila DNA provided by the BDGP from the ECORI digestion of the Sp. the same strain used for the BDGP's pl and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TICATCATCITCACITITICGIGGIAACACAIAAICAAATATCITICCGITITITAGG 535

Ohlendorf D; Schlievert PM, Roggiani M, Stoehr J,

WPI, 1997-099936/09. P-PSDB; AAW12097. Mutant SPE-A toxin with at least one amino acid change is substantially non-lethal - used in vaccine composition for treatment of cancer and streptococcal toxic shock syndrome etc.

Disclosure; Page 77-79; 102pp; English.

```
The present sequence encodes Streptococcus pyogenes Streptococcal toxin A (SPE-A), from which a non-lethal mutant SPE-A, comprising at least 1 amino acid change, can be derived. The mutant SPE-A can be used to produce vaccines to protect animals against wild type SPE-A and to treat cancer and streptococcal toxic shock syndrome (STSS). The mutant SPE-A can seen neutralising antibodies (Ab) to be produced, which may be used to ameliorate STSS symptoms, e.g. fever, hypotension, group A streptococcal infection, myositis, fascitis and liver damage. The neutralising Ab is preferably administered in conjunction with antibiotic therapy. The mutant SPE-A is especially useful for treating T cell lymphomas, and ovarian and uterine cancer. It is thought that mutant SPE-A can be selectively toxic to T cell lymphoma cells

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This is the nucleotide sequence of the Streptococcus pyogenes exotoxin A (SPE-A toxin). The novel mutant Streptococcal SPB-A toxin has at least 1 as change and is nonlethal compared with a protein to wild type SPB-A toxins. The mutant SPB-A toxins are nontoxic and can produce antibodies that neutralise wild type SPE-A toxin activity. The toxins can be used in vaccines and therapeutics to generate a protective immune response against streptococcal infection. They can be used to protect against the development of streptococcal toxic shock syndrome (STSS). In addition, the toxins can be used for treating animals with symptoms of streptococcal infection or STSS and in methods for stimulating T cell proliferation and in the treatment of cancer. In particular they can be used for treating T cell lymphomas, and ovarian and uterine cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 TCTATCCTTGAAACAGGTGCAACATAGATTAGGGGCATGGAGATTTACCAGACAACTATGA 120

(OUEL/) (ROYP/)

```
The sequences given in AAT28539-40 represent probes which were used in the method of the invention for the detection of S. pyogenes in a sample. The method comprises using probes and/or amplification primers which are pecific, ubiquitous and sensitive for determining the presence and/or amount of nucleic acids from selected bacterial species in any sample, where the bacterial nucleic acid comprises a selected target region by the sample with the probes or primers. The method comprises contacting the sample with the probes or primers and detecting the presence and/or amount of hybridised primers or amplification products as and indication of the presence and/or amount of the bacterial species. This method may be used to detect commonly encountered bacterial pathogens, e.g. of the presence and/or amount of the bacterial species. This method may be used to detect commonly encountered bacterial species. This method may be used to detect commonly encountered bacterial species are didincation and intabilis, Streptococcus pneumoniae, Staphylococcus aureus, Staphylococcus spidennia, Entercoccus faccalis, Staphylococcus faccanis, Entercoccus faccalis, Staphylococcus spidennia, Entercoccus faccalis, Staphylococcus spidennia, Entercions and with a high percentage of other severe infections including septicaemia, meningitis, pneumonia, conter and pathod may also be used to evaluate a bacterial correstral.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     540

```

The invention relates to detecting target bacterial species suspected to be present in a sample, comprising contacting nucleic acids of target be bacterial species with an amplification primer pair derived from a contacting bacterial species with an amplification primer pair derived from a content of bacterial species but ubiquitous for different strains, amplifying the bacterial species but ubiquitous for different strains, amplifying the content and detecting the presence or amount of an amplifying the sequence as an indication of the presence or amount of the target bacterial species. The invention includes primers and probes (ABA76662-CC BAR7684) against the target bacterial species. Specially E.coli, CK.pneumoniae, P.aeruginosa, P.mirabilis, S.pneumoniae, S.aureus, CK.pneumoniae, P.aeruginosa, P.mirabilis, S.pneumoniae, S.aureus, S.epidermidis, E.faecalis, S.saprophyticus, S.pyogenes, H.influenzae, CC A. suspected to be present in a sample which is obtained from human patients, animals, environment or food, and which consists of one or more consist colonies. Oligonaclectide probes and primers complementary to the bacterial genes encoding resistance to antibiotics such as bla(tem), bla(shv), aadB, aac(1, aac(2, aac(3) aac(4), mac(4), varA, varA, varA, varX, varX, satA, aacA-aphD, vat, vag, msrA, sul and/or int (ABA76965-ABA77001) are also useful to identify commonly encountered and clinically important resistance genes. The invention provides a rapid method of bacterial Streptococcus pyogenes WPI; 2001-615034/71.                                                                                                                                                                                                                                                                                                   The present sequence is the DNA encoding Streptococcal pyrogenic exotoxin A (SPE-A), a bacterial superantigen toxin (SAg), used for the formulation of SPE-A vaccine SPEA42. The coding region of this SAg toxin is altered by site directed mutagenesis, introducing LA2R mutation, that results in antigen receptor. SPE-A has antibacterial and cytostatic activity. This sequence is useful for the production of SPE-A vaccines and specific antibodies. This vaccine overcomes the disadvantages of the chemically inactivated toxoids and is designed to protect individuals against one or several related staphylococcal and streptococcal toxins. It is used for the diagnosis and treatment or amelioration of superantigen-associated bacterial infections

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GGTTTTTTTCTTTTGTCTTCATGAGTTACCATAACTTTCTATATTATTGACAACTAA 374
disrupt contact between the toxin and the HLA-DR receptor, reducing DR1 binding. SPEA42 can be expressed as a recombinant protein in Escherichia coli as a secreted protein or as a cytoplasmic product. No indicators of toxicity have been detected for the purified recombinant protein, and vaccine studies demonstrate that SPEA42 is highly antigenic, inducing protective immunity in a mouse animal model. The attendated superantigen can be used to protect against superantigen toxin infections. Methods of producing and using altered superantigen toxins as vaccines, and in diagnosis and therapy, are provided by the invention. A multivalent vaccine consisting of altered superantigen toxins from SEA, SEB, SEC-1, TSST-1 and SPEA is predicted to provide protective immunity against the majority of bacterial superantigen toxins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

CAACTAGATTGACAACTAATTCTCAACAAACGTTAATTTAACAACATTCAAGTAACTCCC 254 New superantigen toxin and/or DNA fragment with an altered binding of the encoded altered toxin to either MHC class II or T cell antigen receptor, useful for treating or ameliorating superantigen-associated bacterial The invention relates to an isolated and purified superantigen toxin and/or DNA fragment, which has been aleared so that the binding of the encoded toxin to either major histocompatibility complex (MHC) class II or T cell antigen receptor is altered. The superantigen toxins, DNA fragments, and vaccines are useful for treating or ameliorating superantigen sessociated bacterial infection. The DNA fragments are particularly useful for producing vaccine against superantigen toxin infections. The transformed host cells are useful for analyzing the effectiveness of drugs and agents that affect the binding of superantigens to MHC class II or T-cell antigen receptors. The present sequence represents DNA encoding streptococcal pyrogenic exotoxin A rcargringacagcriarcarcaaraagcriacrirircaaarcaggrcrarccrigaaac TCATGITIGACAGCITATCATCGATAAGCITACTITICGAATCAGGTCTATCAAAC AGGTGCAACATAGATTAGGGCATGGAGATTTACCAGACAACTATGAACGTATATACTCAC egrupernto exotoxin A; ds; superantigen-associated bacterial infection; superantigen toxin; gene; vaccine. (USME-) US MEDICAL RES INST INFECTIOUS 26-NOV-2001; 2001US-00002784 P-PSDB; AAE37683, AAE37687. Ulrich RG Claim New 

The invention provides a superantigen toxin DNA fragment which has been genetically altered such that binding of the encoded altered toxin to either the MHC class II or T cell antigen receptor is disrupted or altered. DNA fragments of the invention are useful in the production of vaccines against bacterial superantigen toxin infections. They are also useful in gene therapy. The present sequence is Streptococcus pyogenes pyrogenic exotoxin A (SpeA) DNA. This sequence is used in the invention superantigen toxin DNA fragment, useful for preparing treating or preventing bacterial infection. 4; Page 128-129; 141pp; English

Sequence 1837 BP; 632 A; 318 C; 249 G; 638 T; 0 U; 0 Other;

Gaps Score 1832.2; DB 8; Length 1837; Pred. No. 4.7e-286; 0; Mismatches 3; Indels 0; Query Match Best Local Similarity 99.8%; Matches 1834; Conservative d

Also included are a recombinant DNA construct (comprising a vector and an isolated and purified altered superantigen toxin DNA fragment), a host cell transformed with the recombinant DNA construct, producing altered superantigen toxin, an altered TSST-1 (toxic shock syndrome toxin) superantigen toxin, peptide, diagnosing superantigen-associated bacterial infection, an autisent comparantigen experantigen toxin for producing antigenic and immunogenic response resulting in the protection of a mammal against superantigen-associated bacterial infection, an artiser isolated from individuals immunised with one or more altered TSST-1 superantigen toxin and an antibody which recognises altered TSST-1 superantigen toxin and an antibody which recognises altered TSST-1 superantigen toxin and an antibody which recognises altered TSST-1 superantigen toxin and an antibody which recognises altered TSST-1 superantigen toxin and an antibody which recognises altered TSST-1 superantigen toxin and an attibody which recognises altered TSST-1 superantigen toxin and an attibody which recognises altered TSST-1 Superantigen toxin DNA fragment is useful for preparing a composition for treating or preventing bacterial infection. A mammalian cell receptor, useful in the treatment of cancer by binding to tumor associated lipids where the binding induces anergy or apoptosis in I cells and antigen presenting cells.

Disclosure, Page, 167pp, English.

The invention relates to a manmalian cell receptor, useful in the creatment of cancer, which binds to tunnour associated lipids and induces an erray or apoptosis in the T cells and antigen presenting cells (APCS).

Also included are a mammalian cell useful in the treatment of cancer where the receptor which binds tunnour associated lipids and induces calluding that atmonticidal immuncyte population in vivo in a manmal to producing (MI) at tunnouricidal immuncyte population in vivo in a manmal of the receptors for immunosypessive fatty acids, ceramides, glycolpids, prophessive fatty acids, ceramides, glycolpids, cells of immunosypessive fatty acids, ceramides, glycolpids, sphingolpids, glycosphingolpids, phosphosphips are alactivated or celetorial atmontant in the treatment of cencer comprising a sphingolpids, glycosphingolpids, phosphosphips are alactivated or celetorial acids, acomposition useful in the treatment of cencer (where an adaptor procein which inhibit treatment of cencer (where an adaptor procein which confident tunnucionally deactivated), a composition useful in the treatment of cencer (comprising a lipid raft conjugated to a superamingen), producing (MI) a tunnucidal immunocyte population are superamingen, to produce a curcinated are inactivated or produce a tunnucidal immunocyte population, and adminisering humanocytes population, and adminisering the tunnucidal immunocyte population, and adminisering the tunnucidal accordated lipids to contact reals, in which aceptors for the tunnucidal activated or produce a tunnucidal activated or produce a tunnucidally activated or produce a tunnucidal accordated lipids to contact reals, in which adaptor produces, and adminisering the tunnucidally activated or produce a tunnucidally activated or produce a tunnucidally activated or produce a tunnucidally activated or produce a tunnucidally activated or produce a tunnucidally activated or produce a tunnucidally activated or produce a tunnucidal and an ammal ly adminisering a selector to manumal ly adminisering

Disclosure; Page 957; 1580pp; English

The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parastical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, bacteria, fungal and parasites, for universal detection and for specific and ubiquitous parasitical species, genus, family and group. A mucleic acid (I) obtained using the method of the invention of an algal, archaeal, bacterial, fungal and using the method of the invention can be used for the universal detection of at least one antimicrobial agent resistance gene or at least one toxin gene. hexA nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, backing and Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria agnorrhoace and Staphylococcus sp., Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved, AAH00010 to AAH002304

New superantigen toxin DNA fragment, useful for preparing a composition for treating or preventing bacterial infection.

WPI; 2003-492125/46. P-PSDB; ABU62335.

Claim 6; Page 39-40; 68pp; English

```
The invention relates to an isolated and purified superantigen toxin DNA fragment is altered so that binding of the encoded altered toxin to either the MRC class I for cell antigen receptor is altered. Also included are a recombinant DNA construct (comprising a vector and an isolated and purified altered superantigen toxin DNA fragment), a host cell transformed with the recombinant DNA construct, producing altered superantigen toxin, an altered TST-1 (toxic shock syndrome toxin) superantigen toxin peptide, diagnosing superantigen-associated bacterial infection, superantigen toxin peptide, diagnosing superantigen toxin for producing antigenic and immunogenic response resulting in the protection of a mammal against superantigen-associated bacterial infection, an arting/ameliorating a superantigen-associated bacterial infection, treating/ameliorating a superantigen-associated bacterial infection, an antimodated from individuals immunised with one or more altered TST-1. Superantigen toxin and an antibody which recognises altered TST-1. Also disclosed are mutated staphylococcal enterotoxin A, B, C1 (SEA, SEB). The superantigen toxin DNA fragment is useful for preparing a composition for treating a preventing bacterial infection. The present sequence encodes the SPEB L42R/SPEB C47S mutant fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1037

The invention provides a superantigen toxin DNA fragment which has been genetically altered such that binding of the encoded altered toxin to either the MHC class II or T call antigen receptor is disrupted or altered. DNA fragments of the invention are useful in the production of vaccines against bacterial superantigen toxin infections. They are also useful in gene therapy. The present sequence is Streptococcus pyogenes pyrogenic exotoxin A (SpeA)-SpeB fusion DNA. This sequence is used in the invention
                                                                                                                                                                                                                                            composition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TATAAAGATAATGAAACGCTTGACTCAAACACAAGCCAAATTGAAGTCTACCTAACAACC

The invention relates to a mammalian cell receptor, useful in the anergment of cancer, which binds to tumour associated lipids and induces anergy or appropsis in the T cells and antigato presenting cells (ARCS).

Also included are a mammalian cell useful in the treatment of cancer where the receptor which binds tumour associated lipids and induces cellular inactivation or death is deleted or functionally deactivated, producing (M1) a tumour associated lipids to contact immunocytes in which receptors for immunosuppressive fatty acids, ceramides, glycophingolipids, ghosphosphingolipids, ghosphosphingolipids, ghosphosphingolipids, gangliosides, slalylated glycans, lipopeptides and proteoglycolipids are inactivated or deleted), a construct useful in the treatment of cancer comprising a superantigen (SAG) nucleotide inserted into a virus, a mammalian T cell useful in the treatment of cancer (where an adaptor protein which useful in the treatment of cancer (where an adaptor protein which intitionally deactivated), a composition useful in the treatment of cancer (where an adaptor protein which cancer (comprising a lipid raft conjugated to a superantigen) producing (M2) a tumour icidal immunocyte population ex vivo in a mammal (by allowing tumour associated lipids to contact immunocytes, in which receptors for the host, producing a tumour associated lipids are inactivated or deleted to produce a cumouricidally activated population, and administering the tumour associated lipids are inactivated a tumour associated lipids are inactivated a tumour associated lipids are inactivated a tumour associated lipids are inactivated a tumour associated lipids are inactivated a tumour associated lipids are inactivated a tumour associated lipids are inactivated a tumour associated lipids are inactivated a tumour associated lipids are inactivated a tumour associated lipids are inactivated or deleted to produce a tumouricidally activated population, and administering a tumour cidal I produce a lipids are inactivated or deleted to produ
A mammalian cell receptor, useful in the treatment of cancer by binding to tumor associated lipids where the binding induces anergy or apoptosis in T cells and antigen presenting cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Superantigen, ds; gene; SAg; staphylococcal enterotoxin; tumour; cancer; apoptosis; gene therapy; mammalian cell receptor; cytostatic; tumour associated lipid; anergy; T cell; antigen presenting cell; APC; tumouricidal immunocyte; antitumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Staphylococcus/Streptococcus erythrogenic toxin gene.

contact T calls, in which adaptor proteins, which inhibit T cell
activated to produce a tumouricidal population of T cells, and
activated to produce a tumouricidal population of T cells, and
administering the tumouricidally activated T cells to the host, or
allowing a superantigen-lipid raft to contact T cells ex vivo, and
administering the tumouricidally activated T cells to the host, treating
administering the tumouricidally activated T cells to the host, treating
(M5) cancer in a mammal (by administering a lipid binding molecule which
binds immunosuppressive tumour associated lipids in vivo), producing (M6)
a tumour associated antigen to contact immunocytes in which adaptor.

CC tumour associated antigen to contact immunocytes in which adaptor.

CC tumour associated or functionally deactivated) and producing (M7) a

tumouricidal T cell population ex vivo in a mammal comprising allowing a

cumouricidal T cell population ex vivo in a mammal comprising allowing a

tumours. Bacterial superantigens are co-administered or administered as

tumours. Bacterial superantigens are co-administered or administered as

tumours and on a fusion construct with a superantigen. Note: The

sequence encodes an anti-tumour protein which is co-administered

c incorporated into a fusion construct with a superantigen. Note: The

sequence date for this patent did not form part of the printed

specification, but was obtained in electronic format from the US patnet

coffice website at "seqdata.uspto.gov/sequence.html?DocID=20020177551"

                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the DNA encoding Staphylococcal enterotoxin B (SEB), a bacterial superantigen toxin (SAG). The coding region of the SAG toxin when altered by site directed mutagenesis, results in disruption of binding of the toxin to both the MHC class II or T-cell antigen receptor. SEB has antibacterial and cytostatic activity. This sequence is useful for the production of SEB vaccines and specific antibodies. This vaccine overcomes the disadvantages of the chemically inactivated toxoids and is staphylococcal and streptococcal toxins. It is used for the diagnosis and treatment or amelioration of superantigen associated bacterial infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAAATATATATTTTTTTTATGAGGGTGACCCTGTTACTCACGAGAATGTGAAATCTGTTG 1032
